

# **LIQUID CRYSTAL DISPLAY AND LIGHT SOURCE DEVICE**

## **THEREOF**

### **ABSTRACT**

A liquid crystal display comprises a liquid crystal panel for displaying images, a first frame, a second frame, and a first optical component. The first frame receives the liquid crystal panel. The second frame has a plurality of lamps for transmitting light to the liquid crystal panel. The first optical component is disposed on the first frame and between the second frame and the liquid crystal panel. The second frame is detachable from the first frame.
